

Nominee: Asigra

Nomination title: **Anti-Ransomware Data Protection**

Ransomware is proliferating and technological advancements by savvy cyber-criminals increase the risk of attacks. Organizations may have the best backup solution, anti-virus protection and backup repositories; however, this next generation of ransomware is so advanced that it makes these technologies antiquated.

Asigra Cloud Backup protects against unknown threats, malware and zero-day vulnerabilities in your backup and recovery stream. The company's comprehensive malware-in-your-backup(s) solution offers attack-loop prevention for physical servers, VMs, and endpoint devices; zero-day exploit protection; two-factor authentication, and variable file naming conventions.

Asigra Cloud Backup safeguards business critical data with a recovery solution for all sources in the data center and beyond, including workstations, laptops, mobile devices and cloud-based applications.

Why nominee should win

1. Attack-loop prevention for physical servers, virtual machines, and endpoint devices
2. Zero-day exploit protection
3. Two-factor authentication
4. Variable file-naming conventions
5. FIPS 140-2 certification
